

KneeBO™

Lightweight & Space-saving

Custom-fit, Easy to use

User-friendly interface

Highlights

- Real-time performance feedback encourages active participation in the training program!
- The quality of muscle training is better than using traditional tools. Parameters can be adjusted to suit individual preferences!

Features

Evaluation

Isotonic
training

ROM
Exercise

Isokinetic
training

Isometric
training

*Strengthen your muscles,
take your mobility to the next level.*

Walking training

The device enables people to walk with less effort. It can support you to walk farther and easier!

Training benefit

Studies show that exoskeleton training can improve gait performance e.g. walking speed and distance.
